

UTAH COUNTY MARBLE

Large Deposit of Ornamental Stone Being Worked.

THE MARION AND GEYSER

THE HEARING FOR CONTEMPT COMES UP TODAY.

TINTIC MINER NEWS.

The Swansea and South Swansea Ore Bins Full.

STOCKS ON THE CURB.

Stocks were active again yesterday on the floor of the mining exchange and the market developed a decided upward tendency.

As usual the attendance was good in the lobby as well as in the pit and it was noticeable that there was a growing demand for the favorite stocks.

Among these was Ajax, which was very strong and made transfers at slightly advancing figures. Bullion-Beck also made gains in the bidding and the holders of stock put the shares up at a proportionate ratio. Daily was weak and fell off in the bids as well as in the asking. Daily West, on the contrary, exhibiting an upward tendency, but buyers and sellers were too far apart to admit of any business in this stock. Galena was more firmly held than on the previous day and made a decided gain in the bidding. Four Aces was firm but inactive, while Mammoth was stationary. Within the past few days there has been an increased demand for Sunshine and the bidding on this stock was active.

None of the unlisted stocks suffered a decline. On the contrary, they were strong either at the quotations of the day before or made good gains. Swansea, which sustained such severe losses during the past few days, but which is recovering from the slump, continued to advance and closed strong, in good demand at \$2.10 bid and \$2.20 asked. South Swansea also made an excellent showing and is moving steadily upward with persistent inquiry for stock. The heavy dealings of the call, however, were in Northern Light, securities, and it was hard for the caller to get away from this stock, which was active at 90 and 92 cents. Buckeye was firm at 11 1/2 cents bid, and \$12.00 asked. Little Pittsburg was a good seller but at nominal figures.

The heaviest sales, however, were made on the streets after the call and these were largely based on the quotations made on the floor of the exchange at the morning call.

The transactions of the day were as follows:

SALES OF STOCK.

100 Ajax at 92 cents.

200 Bullion-Beck at 8 1/2 cents.

1,000 Dalton at 2 1/2 cents.

1,200 Northern Light at 91 cents.

200 Northern Light at 92 cents.

500 Sunshine at 10 1/2 cents.

4,000 Richmond & Anaconda at 1 1/2 cents.

Total sales, 7,200 shares.

Value of sales, \$12,000.

The closing quotations were as follows:

Richmond & Anaconda......05

THE MILLER GOLD STRIKE.

Satisfactory Developments in Gold Mountain District.

Some very important developments have been made in Gold Mountain district, in Platte county, during the past few months and from a letter just received from a resident of that camp it is learned that there is considerable excitement there at the present time over the recent rich discovery in the

pulp to the leaching tanks, while under the leaching tanks automatic carriers in the morning. Considerable work is being done on the tailings and carry them out onto the dumps.

The owners of the La Cigale, which covers 3,000 feet on the apex of the vein, will divide the group into three portions, which will have its own mill, and may be owned by different companies.

A new shaft was started this week on the south end of the property, 500 feet from the Omaha line, and it is the intention by the time the mill is ready for operation to have this shaft down 500 feet, and a large area of ore blocked out by level and drift.

It is anticipated that the cost of mining and milling this ore will not exceed \$1 per ton.

The Swansea and South Swansea Ore Bins Full.

The Alma Mining company, which has been operating the Primrose mine is advertising for bids to sink the shaft another 100 feet.

No contracts have yet been made for the Swansea and South Swansea mines and the ore houses at both mines are reported full to overflowing.

When the ore does begin to go out, it will go with a bang.

We are informed that Charles Butters, the famous mining engineer and metallurgist from South Africa, and his wife, who are in the city, are unable to learn anything as to the object of their business.

Ore was struck this week in the Luzerne at a depth of 100 feet in the shaft.

It is being developed by R. H. Cabell of Salt Lake City under a lease and bond.

A deal is now pending on the Rising Sun, upon which J. C. McChrystal holds an option, and several other properties in that vicinity.

The Rising Sun lies just west of the Colorado City and north of the Crown Point and is believed to be a first class piece of ground.

The Opex shaft has reached the 300-foot level and will sink as fast as possible to the 400. We understand that Captain Hank Smith of the Central-Elk shaft is presently examining the property, has prepared a most highly flattering report of its indications and possibilities.

Nick Carpenter, advises us that he started work on the development of the St. Paul and Minneapolis group in North Tintic. The tunnel on this property is already in 110 feet, and will be down to 200 feet further.

We understand the showing already made is an excellent one.

Superintendent W. H. Wilson of the Indiana mines says that the steady flow of water from that property now amounts to 40,000 gallons daily. He is using the water for culinary and all other purposes and is having tests of the water made. If the tests are satisfactory a pipeline will be run into Silver City at once. The water thus promised to be as valuable as ore.

In the meantime the prospecting of the property is continued and the indications are reported to be most encouraging.

Work has commenced on the old Park mine recently purchased by L. E. Ritter and C. E. Looze. A new incline shaft will be sunk on the vein and will follow it to the deep. We understand that a new company will soon be incorporated to work the property.

The Park mine is one of the old-time famous producers of the Silver City and of the district and with the new developments it is expected to have its neighbors, the Swansea and South Swansea.

Frank Harris, receiver of the United States land office at Salt Lake City, was down last Sunday and Monday looking after the homestead property.

Mr. Harris states that the shaft is now down about 200 feet. The dip of the ore vein has carried it out of the shaft, which will be sunk on the 300 when drifting to catch the vein again will be commenced. He also states that a new incline shaft will be erected on the property immediately after the first of February. The homestead is one of the best properties in the south end of the district and is destined to be a big mine.

B. F. Fleiner and J. K. Bishop of Provo, were in town yesterday on their way to Death Canyon. They state that they have received most flattering reports of the properties, and were taking out two full outfits to work both the Blaine and the Buckeye mines.

Mr. Fleiner states that he expects to commence shipping via Ironton in about two weeks. He also states that they have an abundance of water and will probably not be in need of concentrating the lower grade lead ore on the ground. Both the gentlemen are most enthusiastic over that district, and are confidently expecting that one of the railroads will see the necessity of springing of putting the road through to that point, and that they will have a railroad before next fall. A considerable amount of money is expected to be at work at Death Canyon as well as in West Tintic.

PARK PATRIOT JOTTINGS.

Magnificent Showing in the Great Ontario Mine.

The winze now being sunk from the 1,500-foot level in Ontario shaft No. 2 is down 130 feet, all in good ore. Twenty-five cars of fine, rich ore are being taken out of the winze every twenty-four hours and the writer is confident that the mine will be as soon as stopping will be begun on the 1,700-foot level that the output can be made to exceed 100 cars in twenty-four hours.

The Silver King paid its 32nd dividend last Monday on the same day checks for the twenty-fourth monthly dividend of \$7,500 were sent out to non-resident stockholders.

The annual meeting of the stockholders will be held at Park City, Tuesday, Jan. 13.

The Stalling group of claims on Beaver Creek, seven miles from Kanab, are beginning to attract attention.

Recent assays made in Salt Lake produce well in silver and lead. It is possible that ere the close of this year Summit county will have another producing camp, at least one dividend paying property.

The Constellation people are working industriously in their shaft, which has passed the 300-foot level. Assays are reported to have been taken out of the shaft recently which went several ounces in silver and \$14 in gold.

The Constellation people have a contract on 300 ft. The papers were filed at Salt Lake yesterday.

The old boarding house at the Silver King is being remodeled and fitted up for sleeping quarters. When finished according to plans the Silver King boys will be housed securely enough to defy the storm king.

The hauling of ore from the Valeo has been temporarily suspended. It is said that the ore taken out of the old workings is being stored away, and that no more will be shipped until the ledge has been reached in the new tunnel, which is in about 500 feet.

John J. Daly, president and manager of the Daly-West, and Dr. Allen Fowler, one of the largest stockholders, came up from Salt Lake yesterday.

When not showing Dr. Fowler through the mine yesterday Mr. Daly devoted himself to the agreeable task of making the boys happy by giving them monthly checks for the needful of the Empire canyon road now has been hauled from the Daly-West for over two months.

Mercur Mercury Notes.

Jim Garbolen and partners, who are working on the west dip, about six miles out in the valley, brought in some fine looking ore Wednesday, together with samples of the porphyry accompanying it, which is the same in character as the famous ore reported in the pay mines of the camp.

The boys report assays of between \$4 and \$5.

Conrad and McEntire have secured

control of the Chesapeake group, lying southeast of the Florida Point mine. In the northern part of the district, and will develop it with two shifts.

The property is owned by Hall and Green and covers an extension of the Mercur vein.

An assay running over \$10 was had from the Wonder during the week.

There is a growing interest being taken in the east dip adjacent to and below Manning. Considerable work is being done and quite a number of new claims were located the first of the year. Several deals have been reported during the week, among them the sale of First Mining to W. W. Bentley, the El No. 1 and 2 and the Ida B. Nos. 1 and 2, lying east of the Moonshine group. George Green has great faith in that section and has lately acquired considerable property there.

W. H. Leffingwell, metallurgist and engineer, of Cripple Creek, was in camp during the week, and was so well pleased with the outlook that he made arrangements to keep in touch with its progress in future.

Stocks on the Curb.

Stocks were active on the curb again yesterday and at advancing figures. In the afternoon quotations were reported as follows:

Ajax, 90 and 92 cents bid.

Northern Light, 91 and 92 cents bid.

Mammoth, \$2.10 bid and \$2.20 asked.

Little Pittsburg was active at 1 1/2 cents bid.

Richmond & Anaconda, 1 1/2 cents bid.

Bullion-Beck, 8 1/2 bid and \$9.00 asked.

Swansea, \$2.25 bid and \$2.35 asked.

South Swansea, sales were made at \$1.75.

Buckeye, 12 cents bid, 12 1/2 asked.

Daily West was strong and in good demand, and the statement was made that the company would soon begin heavy shipments of rich ore as the road to the mine was getting to get the mineral down from the mine.

IN THE REALM OF POLITICS.

Three more days now remain until the first ballot for United States senator will be taken. It will be a welcome day, next Tuesday, and much of the anxiety and suspense of primaries and managers alike will be over. This should not be confused with the election of the senator, which will be taken in one day. The indications at the present time warrant no such prophecy.

The Thatcher people are confident, as they always have been, and asserted last evening that their man would go in on the first ballot, some claiming as high as 38 votes, more conservative friends of the ex-senator reduce this claim to 25 votes, but all of them express their confidence in his election. The Thatcher headquarters were filled with people last night and seemed to be a favorite dropping-in place.

At Rawlins' headquarters the reporter was greeted with the announcement that two of Thatcher's supporters had come over and pledged their votes for Mr. Rawlins. Who they were could not be learned, but there was joy in the camp, and no doubt about it. The Rawlins men now claim to have 23 votes on the first ballot, even conceding Mr. Thatcher all the doubtful columns. They are not, however, conceding Thatcher more than 10 votes on the opening ballot, but they are allowing him the benefit of even a few doubtfuls.

The Rawlins people do not claim that their man will go in on the first ballot, but do claim that he will gain strength and momentum and will win with more than enough to elect. Everything was lively around the headquarters in the Cullen, and the candidate cheered pleasantly with all corners.

When the Thatcher managers were asked about the two who were supposed to have strayed over to the Rawlins camp, they disavowed the claim. There is absolutely no foundation for such an assertion, said one of the Thatcher contingent. We have made no such overtures and from now on until next day it is simply a question of how many votes we will have to spare.

The Henderson people made a warning up. No one was to be seen. They do very little talking, but are with a vengeance working hard at their work. In the event of a protest, they figure on something like 100 votes to their candidate.

There is no denying that the warning up. No one was to be seen. They do very little talking, but are with a vengeance working hard at their work. In the event of a protest, they figure on something like 100 votes to their candidate.

The senatorial contest in Utah is a very interesting one. The Henderson people made a warning up. No one was to be seen. They do very little talking, but are with a vengeance working hard at their work. In the event of a protest, they figure on something like 100 votes to their candidate.

The Same... Old Sarsaparilla.

That's Ayer's. The same old sarsaparilla as it was made and sold by Dr. J. C. Ayer 50 years ago. In the laboratory it is different. These modern appliances lend speed to skill and experience. But the sarsaparilla is the same old sarsaparilla that made the record—50 years of cures. Why don't we better it? Well, we're much in the condition of the Bishop and the raspberry: "Doubtless," he said, "God might have made a better berry. But doubtless, also, He never did." Why don't we better the sarsaparilla? We can't. We are using the same old plant that cured the Indians and the Spaniards. It has not been bettered. And since we make sarsaparilla compound out of sarsaparilla plant, we see no way of improvement. Of course, if we were making some secret chemical compound we might... But we're not. We're making the same old sarsaparilla to cure the same old diseases. You can tell it's the same old sarsaparilla cause it works the same. It's a purifier.
